San Diego – A poll was released today by Datamar Inc. regarding candidates from all political parties in the 50th Congressional Special Election to be held April 11th. This survey questioned *50th Congressional District high-propensity registered voters -- voters who voted* in the 2004 Presidential primary and general elections *and* in the 2002 gubernatorial primary and general elections.

Q32. For Whom Would You Vote?

Q32. If the election were held today, for whom would you vote? Please choose “Yes” for one candidate only, which results in “No” for all other candidates. Multiple choices will not be counted.

Q32 For whom would you vote?

	Frequency	Percent	Valid Percent	Cumulative Percent

Total	580	100.0	100.0	

Q11. What is your marital status?

Q11. Marital status

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid Married	407	70.2	70.2	70.2
Seaprated/divorced/widowed	124	21.4	21.4	91.6
Never married	49	8.4	8.4	100.0
Total	580	100.0	100.0	

Q12. What is your household income?

Q12. Household income

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Less than \$40,000	104	17.9	17.9	17.9
	\$40,001-80,000	209	36.0	36.0	54.0
	\$80,001-120,000	151	26.0	26.0	80.0
	\$120,001 or more	116	20.0	20.0	100.0
	Total	580	100.0	100.0	

Methodology: Findings are based on a March 22-24, 2006, telephone survey of high-propensity registered voters in the 50th Congressional District A proprietary algorithm was used to generate random samples of voters for calling. The sampling error for the total sample is +/- 4.07 percent at the 95 percent confidence level. The sampling error for subgroups is larger.

Registered voters vs. high-propensity voters: Registered voters who *actually vote* are significantly fewer than the voters who are registered to vote. Although it is sometimes useful to determine the opinions of all registered voters (and even the opinions of the general population), surveying the opinions of *the high-propensity voters* is more efficient and predictive for electoral/political purposes.

This survey is based on defining “high-propensity” voters as those registered voters who have demonstrated high-propensity by having *actually voted* in one or more recent elections, specifically:

Voted in the 2004 Presidential primary and general elections *and* in the 2002 gubernatorial primary and general elections.

We believe that this performance based definition is superior to other definitions -- for example, labeling as “high-propensity” those registered voters who merely answer “Yes” when asked, “Do you plan to vote in this election?”. The interviewer did not even inquire as to respondents’ “plan” to vote, which we believe to be a generally less accurate predictor of voting than verified recent voting history.

Data Source: San Diego County Registrar of Voters.

There may be some discrepancies in counts. For example, the Registrar reports 46,632 registered voters ages 100 to 106 countywide.
